The Environmental category challenges participants to explore pressing environmental and climate issues facing Pakistan and the world. Across three rounds, delegates will apply their knowledge, scientific reasoning, problem-solving, and innovation to develop creative, practical, and sustainable solutions for a better future.

Team Composition and Rules

- Each team consists of 2–4 participants.
- One member must be designated as the Team Leader.
- All members are expected to contribute fairly throughout the competition.
- Cheating, interference, unsportsmanlike behavior, or unauthorized materials/devices may result in disqualification.
- The decisions of the judges and organizers will be final.
- In the event of a tie at any stage, the tied teams will proceed to a buzzer round to determine the advancing team.

Scope & Preparation:

Delegates will be tested on pressing climate issues and environmental knowledge in Pakistan and globally, including ecosystems, pollution, conservation, and other environmental topics.

Round 1 — Eco-Quest Challenge:

Round 1 will put both individual knowledge and team-based problem-solving to the test. It will consist of two sections, with equal weightage given to each.

Section 1 — Eco-Quiz

Individual participants from each team will participate in a short MCQ-based quiz covering topics from O Level and A Level Environmental Management, along with relevant general environmental knowledge. No negative marking will be applied.

Section 2 — Environmental Scenarios

Teams will tackle environmental scenarios presented through pictures, graphs, case studies, and other formats, accompanied by related questions. Unlike Section 1, there will be no delegate limit, allowing the entire team to collaborate, analyse the scenarios, and submit their answers within the given time.

Clue System:

Each team receives one clue per section but using it forfeits the clue-conservation bonus. Teams that finish a section without using their clue earn the designated bonus points.

Evaluation:

The scores from both sections will be combined, with the top half of the teams advancing. Each section carries 50 points, with up to 10 bonus points available through the Clue Conservation Bonus.

Round 2 — Eco-Crisis: The Press Conference

Round 2 will challenge teams to apply their environmental knowledge to a real-world corporate environmental crisis, testing their research, problem-solving, and ability to defend practical solutions under pressure.

Each team will receive a set of companies and their associated environmental harms. The options will vary between teams, ensuring that teams are not all presented with the same industries or problems. Delegates may select the company and environmental issue they are most confident in addressing. Once selected, teams will receive a scenario explaining how the company is contributing to the environmental harm and how public protests have led the government to threaten the company's closure unless effective action is taken.

Teams will have 35 minutes to analyse the crisis, develop a feasible Plan of Action, and prepare their response. This will be followed by a 5–10-minute press conference, where judges, acting as government officials and journalists, will question them on their proposed solutions.

Evaluation

Teams will be assessed on their scientific understanding, feasibility, practicality, originality, and effectiveness, as well as their ability to clearly justify and defend their Plan of Action. The top 10-12 teams will advance to Round 3.

Round 3 — Green Innovation Summit

The final round will challenge participants to respond to a major environmental or climate crisis in Pakistan. The exact crisis will be revealed on the second day of the competition, while participants will be expected to prepare broadly for Pakistan's major environmental and climate challenges.

Participants will assume the role of the Government of Pakistan and develop an innovative, scientifically sound, and economically feasible Plan of Action. The plan should address implementation, policy, stakeholders, long-term sustainability, and relevant United Nations Sustainable Development Goals (SDGs).

Evaluation:
Teams will present their Plan of Action to a panel of judges in a formal presentation, followed by a Q&A session in which they will be questioned on their proposed strategy, feasibility, and reasoning. Every finalist team will also have the opportunity to ask questions.

Code of Conduct
All participants are expected to:

- Demonstrate good sportsmanship and fair play.
- Respect fellow competitors, invigilators, and judges.
- Follow all venue and event instructions.
- Maintain a clean and quiet workspace.
- Refrain from cheating or unauthorized device use.
- Accept the judges' decisions respectfully.
