Introduction

A creative science and art category where delegates are tasked with inventing and illustrating their own original ecosystem. Delegates must create a unique environment containing original organisms and other living elements that interact with one another and their surroundings.

The ecosystem must not be an already-existing ecosystem such as a rainforest, coral reef, desert, or tundra. Similarly, existing animals, plants, fungi, or other organisms should not be directly used as the inhabitants. Delegates may take inspiration from existing organisms, but should modify, combine, or reimagine their features to create something original.

There are no elimination rounds and scoring is cumulative.

Round 1: Design

Duration: 3 hours
Delegates will design their original ecosystem, including its environment and the organisms that inhabit it.

- The ecosystem must be fictional and original, rather than a recreation of an existing ecosystem.
- Delegates must create original organisms and should demonstrate how they interact with their environment and one another.
- Delegates may consider elements such as food sources, predators and prey, shelter, environmental conditions, and adaptations.
- Submissions must be on an A4 sheet of paper and may contain multiple sketches, diagrams, figures, or drawings.

- While not disallowed, delegates are advised to be conservative with written text and focus on visual communication.
- Reference material is allowed and will not lead to negative marking, but the final ecosystem and organisms should be the delegate's own creations.
- Delegates may use any medium of art (pencil, ink, markers, paint, mixed media, digital), though simplicity is advised.
- If using digital media, submissions should use the A4 aspect ratio and a timelapse must be submitted alongside the work.
- Delegates are expected to bring their own art supplies, including paper

Note: This is an accumulation round.

Round 2: Illustration

Duration: 5 hours (digital) / 8 hours (traditional)
Delegates will bring their ecosystem to life by creating an A3-sized illustration based on their design from Round 1.

- The illustration must clearly depict the same original ecosystem and organisms designed in Round 1.
- The submission should be one coherent image showing the environment and its inhabitants.
- The ecosystem and organisms should remain original and should not be replaced with existing animals or a real-world ecosystem.
- Delegates are encouraged to use composition, lighting, colour, scale, and perspective to communicate their ecosystem.
- Submissions must be on an A3 sheet of paper.

- Reference material is allowed and will not necessarily lead to negative marking.
- Delegates may use any medium of art (pencil, ink, markers,
- paint, mixed media, digital).
- If using digital media, submissions should use the A4/A3 aspect ratio and a timelapse must be submitted alongside the work.
- Delegates are expected to bring their **own** art supplies, including paper
